Évaluation d'un programme de réadaptation respiratoire

Amandine RAPIN

Médecin Physique et de Réadaptation

CHU de Reims

Université Reims Champagne Ardennes

Propriétés d'une mesure

MCID : Minimal clinically important change
= différence minimal cliniquement significative

MDC = Minimal detectable change
→ Fruit de la variabilité

Pourquoi est ce important ?

Conception d'un programme de rééducation

Quelle déficience ?

Quelle limitation de participation?

Quelle restriction d'activité ?

Que souhaite le patient ?

Mise en place des techniques en respectant le FITTS pré-défini

Maintien du programme

Ou

Adaptation du programme

Ou

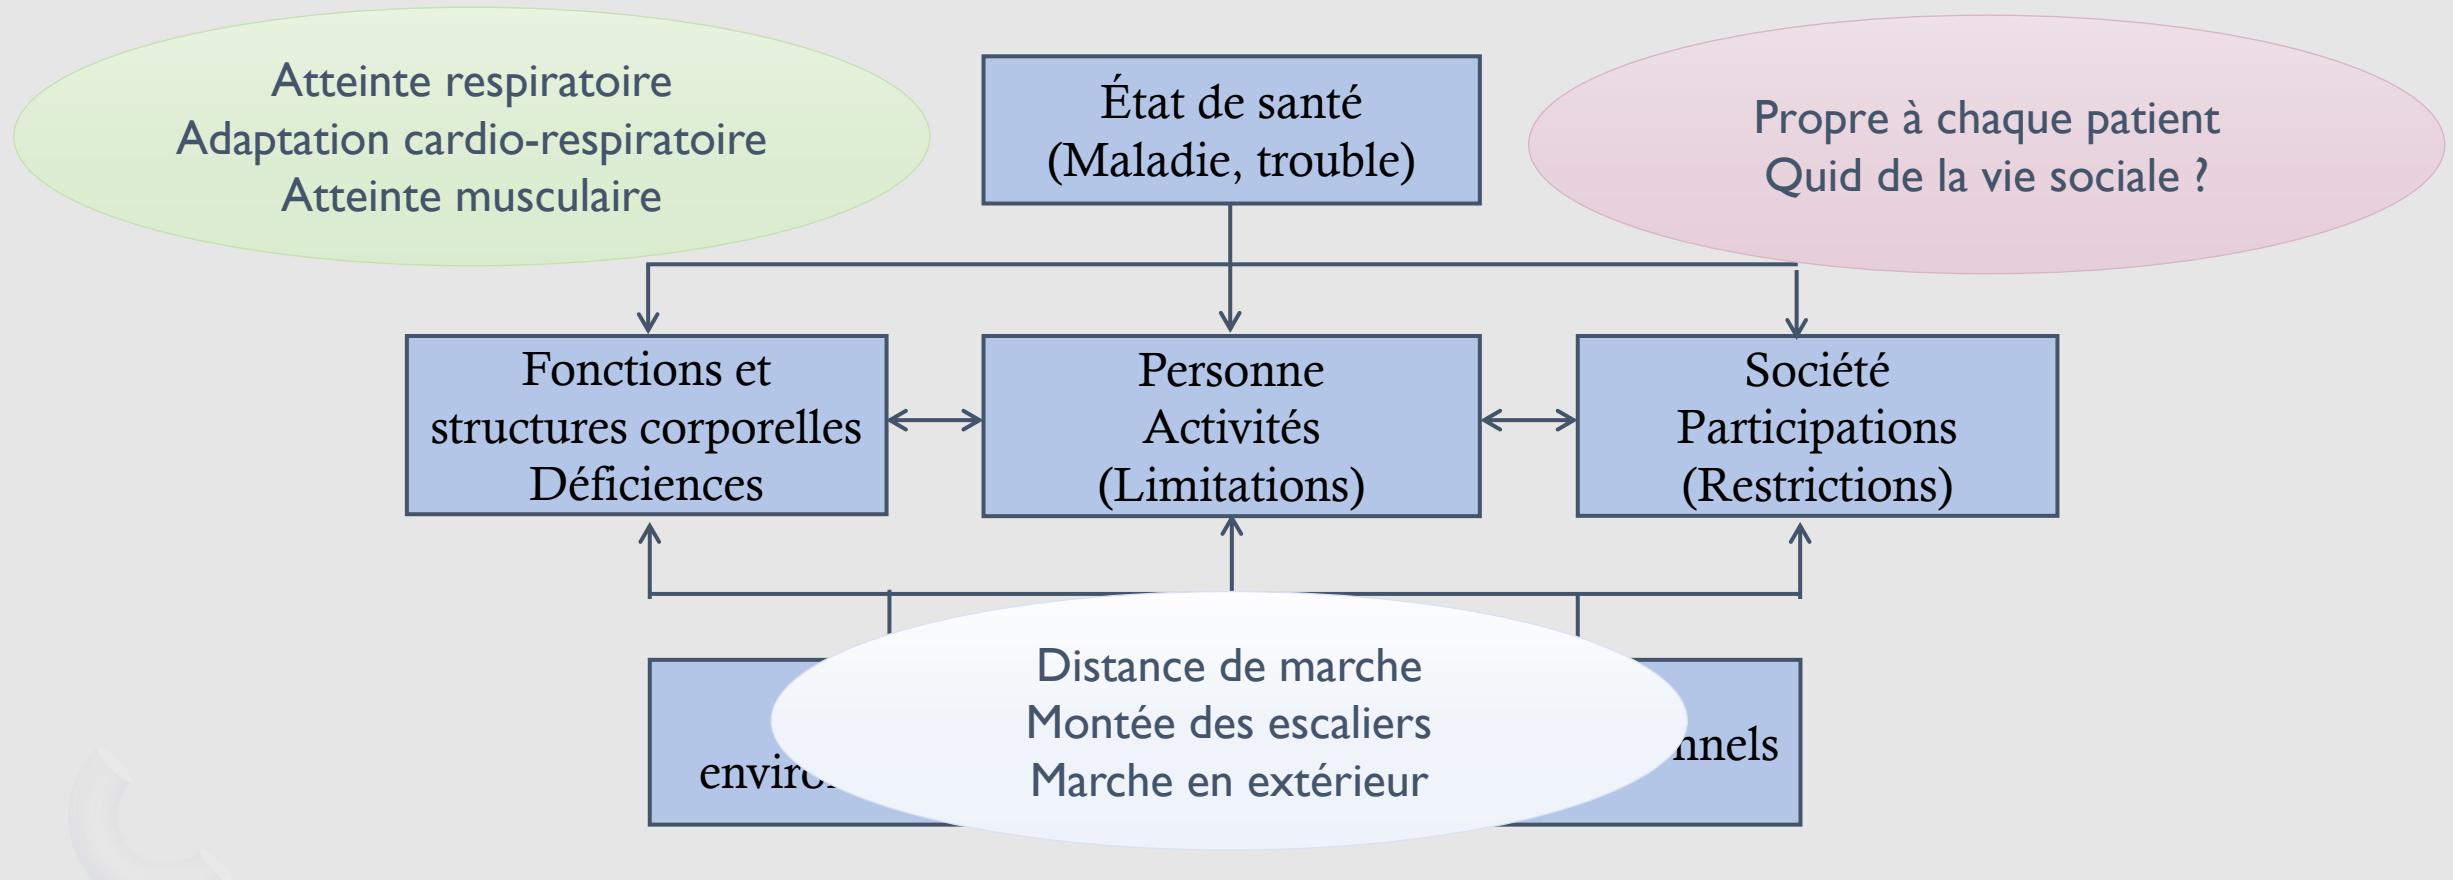

Fin de programme

Quelles évaluations proposer ?

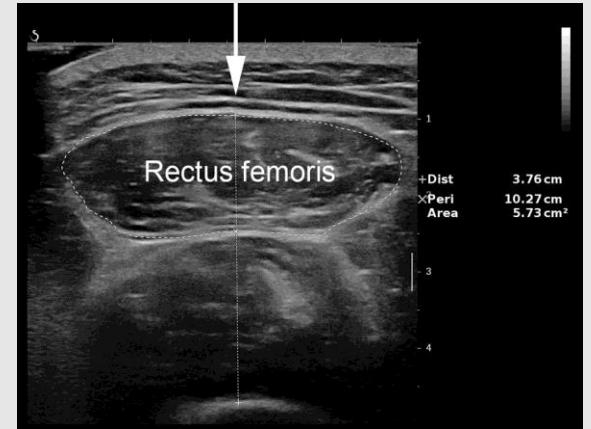

Que doit on évaluer ?

Évaluation de la force musculaire

- Mesure quadricipitale

- Force statique avec dynamomètre
- Mesure échographique trophicité musculaire

- Handgrip ?

MDP = 7,5 Nm

- Mesure d'endurance → test de lever de chaise

- Test de lever de chaise sur une minute

+ 5 répétitions = HR mortalité 0,58

Évaluation de la fonction respiratoire

- EFR ?
- PI et PEMax ?
- Ampliation thoracique ?
- Questionnaire de dyspnée
 - Quantitatif et qualitatif (sensoriel)
 - Affectif (quel inconfort?)
 - Conséquences (retentissement fonctionnel, QDV)

Adaptation cardio-respiratoire

- EFX avec mesure des échanges gazeux

- Test navette (ISWT)

MCID = 47,5m

- Test d'endurance

- Test navette (ESWT)

MCID = 100s ou + 33%

MID = 61s ou 82m

Évaluation de la marche

- Test de 6 minutes de marche
 - Attention effet d'apprentissage 24-29m

MCID 25 à 33m

- Evaluation de l'équilibre +++
 - TUG MDC 31,84s
 - Berg balance scale MDC 3,5 à 6,2 ?
 - Short performance battery MCID 1,2 ?

Qualité de vie

- Questionnaire de saint Georges

MCID = 4

- COPD assessment test (CAT)

MCID = 2

- VQ II

MCID = - 2

- Clinical COPD questionnaire

MCID = 0,4

Clinical COPD questionnaire						
Please circle the number of the responses that best describes how you have been feeling during the past week.						
	Never	Hardly at all	A few times	Sometimes	Often	Very often
On average, during the past week, how often did you feel:						
1. Short of breath at rest?	0	1	2	3	4	5
2. Short of breath during physical activities?	0	1	2	3	4	5
3. Concerned about getting a cold or your breathing getting worse?	0	1	2	3	4	5
4. Depressed (down) because of your breathing problems?	0	1	2	3	4	5
In general, during the past week, how much trouble did you have with your breathing problems?						
5. Did you cough?	0	1	2	3	4	5
6. Did you produce phlegm?	0	1	2	3	4	5
On average, during the past week, how breast were you to your breathing problems?						
7. Shortness of breath during walking, climbing stairs, or doing housework?	0	1	2	3	4	5
8. Shortness of breath during physical activities, such as working, housework, sports, or exercise?	0	1	2	3	4	5
9. Daily activities (such as dressing, washing, grocery shopping, eating, working, chores, visiting friends, etc.)?	0	1	2	3	4	5
10. Social activities (such as going to church, socializing with friends, going to restaurants, visiting friends, etc.)?	0	1	2	3	4	5
